Code Smell

Underscores should be used to make large numbers readable

Code Smell

"ToString()" calls should not be redundant

Code Smell

"==" should not be used when "Equals" is overridden

Code Smell

An abstract class should have both abstract and concrete methods

Code Smell

Multiple variables should not be declared on the same line

Code Smell

Culture should be specified for "string" operations

Code Smell

"switch" statements should have at least 3 "case" clauses

Code Smell

break statements should not be used except for switch cases

Code Smell

String literals should not be duplicated

Code Smell

Files should contain an empty newline at the end

Code Smell

Unused "using" should be removed

Code Smell

Assemblies should explicitly specify COM visibility

Analyze your code

Code Smell Major api-design

Assemblies should explicitly indicate whether they are meant to be COM visible or not. If the ComVisibleAttribute is not present, the default is to make the content of the assembly visible to COM clients.

Note that COM visibility can be overridden for individual types and members.

Noncompliant Code Example

```
using System;

namespace MyLibrary // Noncompliant
{
}
```

Compliant Solution

```
using System;

[assembly: System.Runtime.InteropServices.ComVisible(false)]
namespace MyLibrary
{
}
```
