Code Smell

Underscores should be used to make large numbers readable

Code Smell

"ToString()" calls should not be redundant

Code Smell

"==" should not be used when "Equals" is overridden

Code Smell

An abstract class should have both abstract and concrete methods

Code Smell

Multiple variables should not be declared on the same line

Code Smell

Culture should be specified for "string" operations

Code Smell

"switch" statements should have at least 3 "case" clauses

Code Smell

break statements should not be used except for switch cases

Code Smell

String literals should not be duplicated

Code Smell

Files should contain an empty newline at the end

Code Smell

Unused "using" should be removed

Code Smell

"switch" statements should not be nested

Analyze your code

Code Smell Critical pitfall

Nested `switch` structures are difficult to understand because you can easily confuse the cases of an inner `switch` as belonging to an outer statement. Therefore nested `switch` statements should be avoided.

Specifically, you should structure your code to avoid the need for nested `switch` statements, but if you cannot, then consider moving the inner `switch` to another function.
