Code Smell

Underscores should be used to make large numbers readable

Code Smell

"ToString()" calls should not be redundant

Code Smell

"==" should not be used when "Equals" is overridden

Code Smell

An abstract class should have both abstract and concrete methods

Code Smell

Multiple variables should not be declared on the same line

Code Smell

Culture should be specified for "string" operations

Code Smell

"switch" statements should have at least 3 "case" clauses

Code Smell

break statements should not be used except for switch cases

Code Smell

String literals should not be duplicated

Code Smell

Files should contain an empty newline at the end

Code Smell

Unused "using" should be removed

Code Smell

### Types should not extend outdated base types

Analyze your code

Code Smell Minor ?

With the advent of .NET framework version 2, certain practices have become obsolete.

In particular, exceptions should now extend `System.Exception` instead of `System.ApplicationException`. Similarly, generic collections should be used instead of the older, non-generic, ones. Finally when creating an XML view, you should not extend `System.Xml.XmlDocument`.

This rule raises an issue when an externally visible type extends one of these types:

- `System.ApplicationException`
- `System.Xml.XmlDocument`
- `System.Collections.CollectionBase`
- `System.Collections.DictionaryBase`
- `System.Collections.Queue`
- `System.Collections.ReadOnlyCollectionBase`
- `System.Collections.SortedList`
- `System.Collections.Stack`

#### Noncompliant Code Example

```
using System;
using System.Collections;

namespace MyLibrary
{
    public class MyCollection : CollectionBase // Noncompliant
    {
    }
}
```

#### Compliant Solution

```
using System;
using System.Collections;

namespace MyLibrary
{
    public class MyCollection : Collection<T>
    {
    }
}
```
