Code Smell

Underscores should be used to make large numbers readable

Code Smell

"ToString()" calls should not be redundant

Code Smell

"==" should not be used when "Equals" is overridden

Code Smell

An abstract class should have both abstract and concrete methods

Code Smell

Multiple variables should not be declared on the same line

Code Smell

Culture should be specified for "string" operations

Code Smell

"switch" statements should have at least 3 "case" clauses

Code Smell

break statements should not be used except for switch cases

Code Smell

String literals should not be duplicated

Code Smell

Files should contain an empty newline at the end

Code Smell

Unused "using" should be removed

Code Smell

Operator overloads should have named alternatives

Analyze your code

Code Smell Minor ? convention

Operator overloading is convenient but unfortunately not portable across languages. To be able to access the same functionality from another language you need to provide an alternate named method following the convention:

Operator	Method Name
+ (binary)	Add
&	BitwiseAnd
	BitwiseOr
/	Divide
==	Equals
^	Xor
>	Compare
>=	Compare
!=	Equals
<	Compare
<=	Compare
!	LogicalNot
%	Mod
* (binary)	Multiply
~	OnesComplement
- (binary)	Subtract
- (unary)	Negate
+ (unary)	Plus

This rule raises an issue when there is an operator overload without the expected named alternative method.

Exceptions

This rule does not raise an issue when the class implementing the comparison operators >, <, >= and <= contains a method named CompareTo.
