"protected" members

Code Smell

Underscores should be used to make large numbers readable

Code Smell

"ToString()" calls should not be redundant

Code Smell

"==" should not be used when "Equals" is overridden

Code Smell

An abstract class should have both abstract and concrete methods

Code Smell

Multiple variables should not be declared on the same line

Code Smell

Culture should be specified for "string" operations

Code Smell

"switch" statements should have at least 3 "case" clauses

Code Smell

break statements should not be used except for switch cases

Code Smell

String literals should not be duplicated

Code Smell

Files should contain an empty newline at the end

Code Smell

Unused "using" should be removed

Code Smell

Unassigned members should be removed

Analyze your code

Code Smell Minor ? suspicious

Fields and auto-properties that are never assigned to hold the default values for their types. They are either pointless code or, more likely, mistakes.

Noncompliant Code Example

```
class MyClass
{
    private int field; // Noncompliant, shouldn't it be initia
    private int Property { get; set; } // Noncompliant
    public void Print()
    {
        Console.WriteLine(field); //Will always print 0
        Console.WriteLine(Property); //Will always print 0
    }
}
```

Compliant Solution

```
class MyClass
{
    private int field = 1;
    private int Property { get; set; } = 42;
    public void Print()
    {
        field++;
        Console.WriteLine(field);
        Console.WriteLine(Property);
    }
}
```

Exceptions

- Fields on types decorated with System.SerializableAttribute attribute.
